With the noble creation of the eMonument [Network of Maria Theresa Gymnasiums Graduates](#), which combines the written word, photography, documents, testimony and film into a modern digital tribute to our cultural heritage, two worlds meet in a special way — analog and digital. The first carries the warmth of time, the second gives it durability and accessibility for future generations.

Time leaves gentle but inexorable traces on tapes, videocassettes, film reels and photographs. Sound loses clarity, images fade, records become fragile. But the stories, faces and voices captured in them remain an invaluable part of our personal and shared history.

At [Studio Vrtinec](#), we have been creating film stories for more than 30 years and taking care of the digitization and restoration of analog media: audio and videocassettes, tapes, 8 mm, 16 mm and 35 mm film strips, photographs, slides and CDs. With cutting-edge technology and respect for every record of time, we transfer valuable content into a modern digital format that you can easily play on your computer or TV screen and share with your loved ones or the wider community.

Just as an eMonument preserves the creative spirit of great personalities or events for the future, we also believe that every family memory deserves a new, lasting life. Analog records are precious, but digital allows them to stay alive — understandable, accessible and safe.

That is why we implement our slogan with responsibility and dedication: “We save your memories”.

If you keep valuable recordings or photographs at home, let's give them a future together.
